Summary

Junior DevOps Engineer with 7 months of hands-on experience in Linux administration, AWS, Kubernetes, Docker, Jenkins, and DevSecOps practices. Experienced in building and managing CI/CD pipelines, containerized deployments, infrastructure automation, and Kubernetes troubleshooting. Proficient in implementing security scanning, monitoring, and AI-assisted diagnostics for cloud-native environments using tools such as SonarQube, Trivy, Prometheus, Grafana, and K8sGPT. Passionate about designing secure, scalable, and reliable infrastructure while continuously learning modern cloud-native technologies.

Education

Bachelor of Technology in Computer Science and Engineering

D.R. M.G.R. Educational and Research Institute, Chennai

Aug 2021 – May 2025

Experience

Junior DevOps Engineer

Revolite Infotech Pvt. Ltd., Chennai

Jan 2026 – Present

- Performing Linux server administration, system troubleshooting, and deployment support to ensure application availability and stability.
- Supporting AWS cloud services including EC2, IAM, S3, ECS, EKS, and CloudFormation for infrastructure provisioning and management.
- Collaborating with development and QA teams to coordinate release management and deployment activities using Git-based workflows.
- Assisting with infrastructure automation and configuration management using Ansible to streamline operational tasks.
- Troubleshooting networking, VPN, firewall, and infrastructure-related issues to maintain reliable system operations.
- Monitoring system performance, application logs, and infrastructure health to improve uptime, reliability, and deployment efficiency.

Projects

AI-Powered DevSecOps Pipeline for Kubernetes Analysis (Self-Learnt)

Link

- Built an AI-powered DevSecOps pipeline integrating GitHub, Jenkins, SonarQube, Trivy, Docker, Harbor, Kubernetes, and K8sGPT for secure application delivery.
- Automated Kubernetes deployment analysis to identify configuration issues, failed workloads, resource constraints, and security vulnerabilities across cluster resources.
- Implemented container image scanning, code quality analysis, and GitOps-inspired deployment workflows to improve reliability and security.
- Integrated OpenAI-powered diagnostics and Slack notifications to provide automated troubleshooting insights during deployment and runtime incidents.

Technical Skills and Certifications

Containers & Orchestration: Kubernetes, Docker

Infrastructure as Code: Terraform

CI/CD Tools: Jenkins, GitHub Actions

Monitoring & Metrics: Prometheus, Grafana

Cloud Platform: AWS (Amazon Web Services)

Programming & Scripting: Python, Shell Scripting

Version Control: Git, GitHub

Configuration Management: Ansible

Security Tools: SonarQube, Trivy

Operating Systems: Linux, Windows

Certification: AWS DevOps Certification – FITA Academy (*Jun 2025*)
