PROFESSIONAL SUMMARY

Junior DevOps Engineer with hands-on experience in **AWS cloud infrastructure, Linux administration, CI/CD automation, Docker, and Kubernetes**. Experienced with AWS services including **EC2, S3, IAM, ECS, and CodeCommit**, along with Jenkins, Harbor, Terraform, Prometheus, and Grafana. Skilled in maintaining CI/CD pipelines across **8+ projects**, implementing **Kubernetes blue-green deployments and automated rollback strategies**, and cutting deployment time from **10–12 minutes** to **2–3 minutes** through pipeline automation, alongside Linux administration and Bash-based backup automation to S3.

PROFESSIONAL EXPERIENCE

Junior DevOps Engineer
Revolite Infotech Pvt. Ltd.

Jan 2026 – Aug 2026
Chennai, Tamil Nadu

- Supported cloud infrastructure, application deployments, and operational activities for web applications across **e-commerce, hiring, workforce management, and task management** domains in development, UAT, and production environments.
- Provisioned and managed AWS infrastructure using **EC2, IAM, S3, ECS, and CodeCommit** for application hosting, access management, container orchestration, and source control.
- Administered **Linux servers**, troubleshooting networking, DNS, application services, deployment, system-level, and operational issues.
- Built and maintained **Jenkins CI/CD pipelines**, automating source checkout, builds, Docker image creation, registry publishing, and Kubernetes deployments – cutting deployment time from **10–12 minutes (manual)** to **2–3 minutes (automated)**.
- Containerized applications using **Docker** and deployed workloads on self-managed **Kubernetes** clusters, managing deployments, services, namespaces, configurations, and application rollouts.
- Implemented monitoring using **Prometheus and Grafana** to track application and infrastructure health and support operational troubleshooting.
- Automated scheduled database backups spanning development, UAT, and production environments using **Bash**, storing backups to **Amazon S3** for centralized recovery.

PROJECTS

Enterprise Retail & E-Commerce Platform

NDA

- Designed a Jenkins pipeline generating **Git commit-based image tags** for versioned image publishing to Harbor ahead of Kubernetes deployment.
- Implemented **Kubernetes blue-green deployment**: released to the inactive environment, validated pod readiness and rollout status, then switched traffic post-validation, with **automated rollback** to the last healthy version on failure.

AI-Powered DevSecOps Pipeline

link

- Built an end-to-end DevSecOps pipeline for a Spring Boot REST API using **Jenkins, Docker multi-stage builds, Harbor, and Kubernetes** with rolling deployments and Actuator-based health probes.
- Integrated **SonarQube** for static code analysis and **Trivy** for container image vulnerability scanning as automated pipeline gates.
- Developed an **AI-powered Jenkins failure analyzer** using the Gemini API to automatically diagnose pipeline failures and surface likely root causes.

TECHNICAL SKILLS

Cloud: AWS (EC2, S3, IAM, ECS, CodeCommit)

CI/CD: Jenkins, GitHub Actions

Containers & Orchestration: Docker, Kubernetes

Infrastructure as Code: Terraform

Monitoring & Observability: Prometheus, Grafana

Scripting: Bash, Python

Version Control: Git, GitHub

Operating Systems: Linux (Ubuntu), Windows

EDUCATION

Bachelor of Technology in Computer Science and Engineering

D.R. M.G.R. Educational and Research Institute, Chennai

Aug 2021 – May 2025
