Summary

Junior DevOps Engineer at Revolite Infotech, working hands-on with Kubernetes, Docker, and Jenkins to manage containerized deployments and CI/CD pipelines. Support AWS infrastructure across EC2, EKS, and ECS, with monitoring set up using Prometheus and Grafana. Fresh in my career but already handling real production workflows. Looking to deepen my cloud-native and infrastructure automation skills.

Education

Bachelor of Technology in Computer Science and Engineering
D.R. M.G.R. University, Chennai

Aug 2021 – May 2025

Experience

Junior DevOps Engineer
Revolite Infotech Pvt. Ltd., Chennai

Jan 2026 – Present

- Performing Linux server administration, system troubleshooting, and deployment support to ensure application availability and stability.
 - Supporting AWS cloud services including EC2, IAM, S3, ECS, EKS, and CloudFormation for infrastructure provisioning and management.
 - Collaborating with development and QA teams to coordinate release management and deployment activities using Git-based workflows.
 - Assisting with infrastructure automation and configuration management using Ansible to streamline operational tasks.
 - Troubleshooting networking, VPN, firewall, and infrastructure-related issues to maintain reliable system operations.
 - Monitoring system performance, application logs, and infrastructure health to improve uptime, reliability, and deployment efficiency.
-

Projects

Automated Deployment of Zomato Clone on AWS (Self-Learnt)

Link

- Deployed a React-based frontend application to Amazon EKS using Docker containers, implementing a full CI/CD pipeline with Jenkins connected to AWS CodeCommit.
 - Configured Jenkins pipeline stages covering code checkout, Docker image build, security scanning with Trivy and OWASP Dependency Check, and automated deployment to EKS.
 - Integrated SonarQube for static code quality analysis and set up Grafana dashboards to monitor application and infrastructure metrics via Prometheus.
 - Focused on end-to-end DevOps toolchain integration as a self-learning exercise covering containerization, orchestration, security, and observability.
-

Technical Skills and Certifications

Containers & Orchestration: Kubernetes, Docker

Infrastructure as Code: Terraform

CI/CD Tools: Jenkins, GitHub Actions

Monitoring & Metrics: Prometheus, Grafana

Cloud Platform: AWS (Amazon Web Services)

Programming & Scripting: Python, Shell Scripting

Version Control: Git, GitHub

Configuration Management: Ansible

Operating Systems: Linux, Windows

Certification: AWS DevOps Certification – FITA Academy (*Jun 2025*)
